

Yale NewHaven Health

# A novel tool to monitor adherence to oral oncolytics: a pilot study

Sun W, Reeve R, Ouellette T, Stutsky M, De Jesus R, Huffer MJ, Mougalian SS

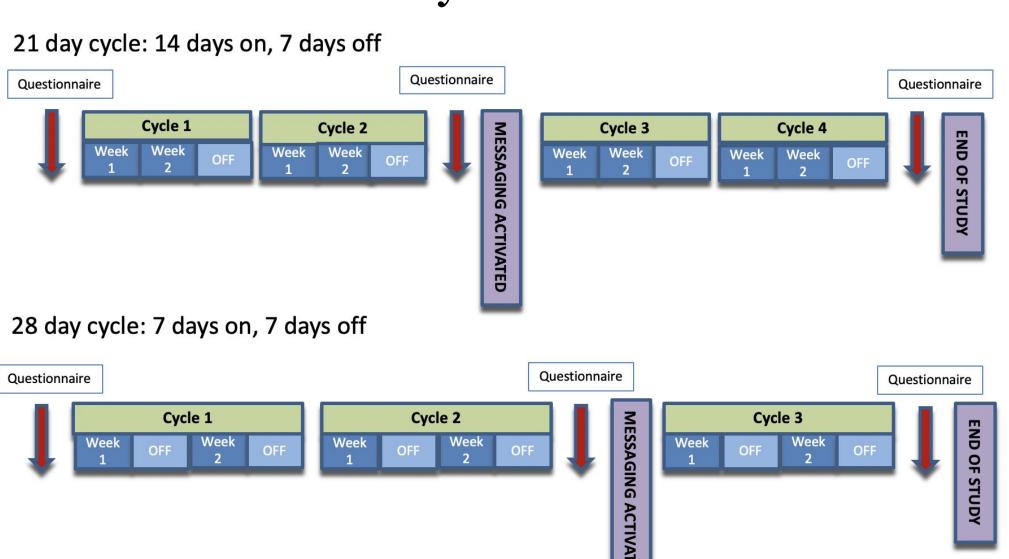

# **Background**

- Non-adherence is an important issue in cancer care
- Accurately measuring adherence is challenging
- Nomi "smart" bottles record real-time medication taking behavior via changes in weight of bottle contents
- Nomi sends adherence data to providers via an interactive dashboard, and can send text messages to patients in cases of non-adherence
- **Aim:** Assess the functionality of Nomi in monitoring capecitabine adherence & intervening with text notifications

# **Methods**

- N = 28 patients were prescribed capecitabine for breast, colorectal, pancreatic, or biliary cancer, with planned duration of therapy >= 12 weeks, 21- or 28-day cycles
- Patients were enrolled via Outpatient Pharmacy Services at Yale New Haven Health, where capecitabine was filled
- Pre-intervention: cycles 1 + 2, patients were monitored only
- Post-intervention: cycles 3 +/- 4, text messaging enabled
- Adherence = # correct doses / total prescribed doses
- Conversion: patient takes dose after text message reminder

# Study Schema

# Results

#### Patient demographics

N total	28				
Female N (%)	20 (71)				
Age Mean (SD)	60.6 (13.9)				
Income Mean (SD)	\$73.0 k (\$28.4 k)				
Malignancy N (%)					
Breast	15 (54)				
Colon	9 (32)				
Cholangio	4 (14)				
Cycle N (%)					
21 day	11 (39)				
28 day	14 (50)				
Switched	3 (11)				
Stage N (%)					
Metastatic	24 (86)				
Localized	4 (14)				
(adjuvant)	4 (14)				
Race N (%)					
Caucasian	23 (82)				
Black	4 (14)				
Not reported	1 (4)				
Ethnicity N (%)					
Non-Hispanic	27 (96)				

Not reported

#### Analyses

- We identified three categories/phenotypes of patients by examining patterns in % change in adherence from pre to post-intervention:
  - category 1 (>8%)
  - category 2 (-8% to 8%)
  - category 3 (<-8%)

#### Category 1

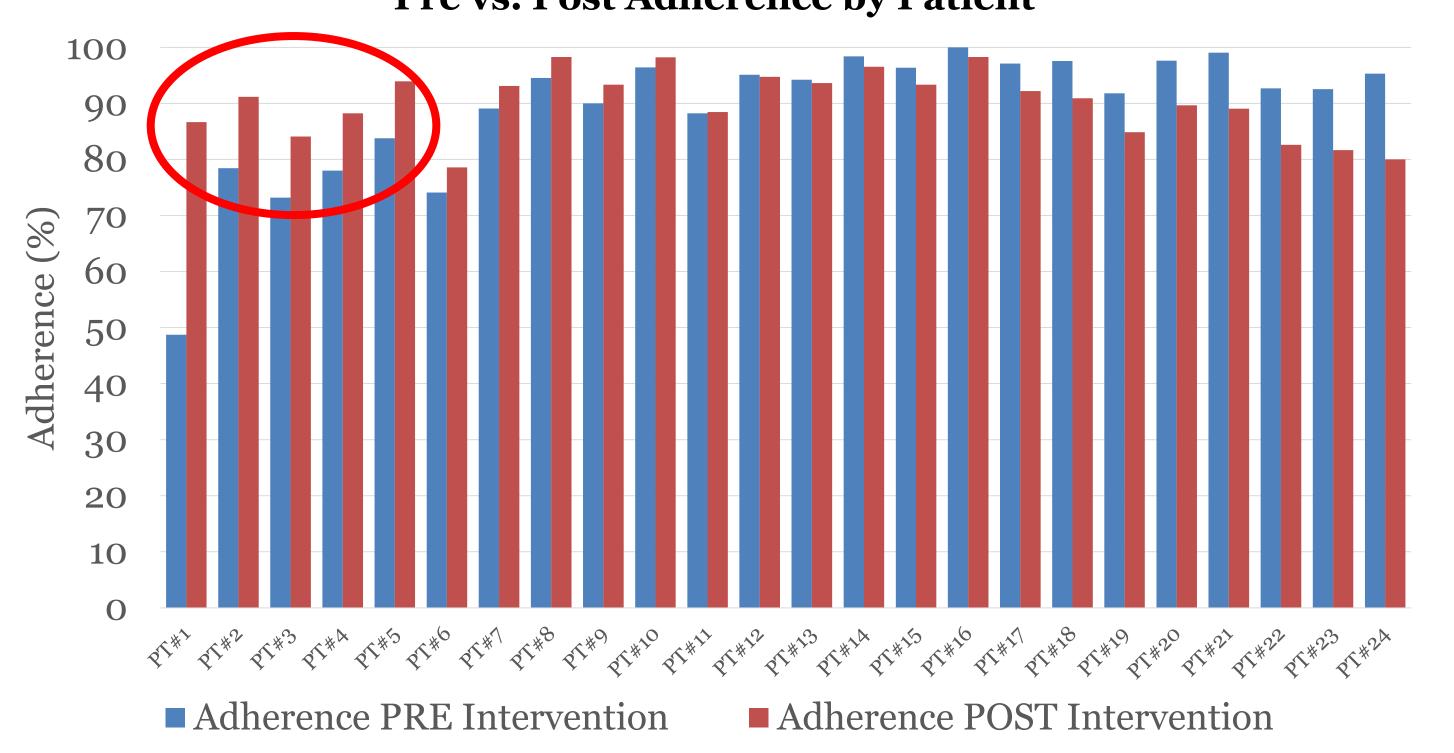

- Most demonstrated a conversion rate of >35%
- Tended to live in regions with the lowest average household income (Mean = \$58.9 k)

#### **Category 3**

1(4)

• Tended to live in regions with the highest average household income (Mean = \$91.0 k)

# Pre vs. Post Adherence by Patient

#### **Income and Adherence by Category**

	Category 1	Category 2	Category 3	Pre-Only
N	5	15	4	4
Income (\$)	58.9k (29.7k)	77.5 (25.9)	91.ok (34.1k)	57.0k (23.3k)
Post-Pre Adherence (%)	16 (12)	-1 (4)	-12 (3)	75 (14)
Total Overall Adherence (%)	74 (12)	89 (9)	83 (12)	75 (12)

#### Patient feedback/Technical considerations

- 60% of feedback survey respondents indicated desire to continue using Nomi
- 80% indicated that they would recommend it to others
- Bottle was difficult to open and close for some participants
- Incorrect timing of texts after shift in cycle/dosage change
- Bottle connectivity was poor in some regions
- Bottle ran out of battery for some patients; replacement needed to be sent

# Limitations

- Confounds of hospitalizations, disease progression, medication toxicity.
- Technical difficulties with bottle
- Difficult to elicit feedback from patients during the study

# Conclusions

- Nomi can monitor and intervene in real-time for patients taking capecitabine
- Adherence overall was high, and some patients appeared to benefit more from text message interventions
- Future work should focus on patients deemed high risk for non-adherence ("Category 1" patients)
